PROFESSIONAL EXPERIENCE

Capgemini, Bengaluru

Feb 2023 - Present

Associate Consultant

- Led migration from Spring Boot 2.x to 3.x and Java 8 to Java 17, reducing production defects by ~15% and improving application stability.
- Designed and optimized 50+ REST APIs and 30+ microservices using Spring Boot, Hibernate, and JPA for distributed backend systems.
- Optimized high-volume reporting APIs and 20+ PL/SQL queries using pagination, query tuning, and database indexing, significantly improving response time and backend performance for large datasets.
- Implemented JWT-based authentication and RBAC using Spring Security to strengthen application security and access control.
- Worked on containerized microservices deployments using Docker and Azure Kubernetes Service (AKS), supporting pod monitoring, auto-scaling, and rolling deployments across AKS clusters.
- Coordinated CI/CD deployments using Jenkins, ensuring smooth production releases, rollback procedures, and deployment reliability.
- Worked with event-driven communication patterns and Kafka-based messaging for asynchronous microservices processing.
- Leveraged AI-assisted development tools such as GitHub Copilot for code generation, API development, debugging, and accelerating development productivity across sprint deliverables.
- Developed unit and integration test cases using JUnit and Postman to improve code quality, API validation, and regression coverage.
- Collaborated within Agile/Scrum teams, contributing to sprint delivery, code reviews, technical discussions, and SDLC activities.

SKILLS

- Languages:** Java (8/11/17), JavaScript, SQL
- Frameworks:** Spring Boot, Spring MVC, Spring Security, Spring Framework, Hibernate, JPA, Maven, RESTful APIs, Microservices, React, Angular
- Testing:** JUnit, Mockito, API Testing, Integration Testing, Postman, Swagger
- Databases:** Oracle (PL/SQL), MySQL, MongoDB, H2
- Cloud & DevOps:** Azure, Docker, Kubernetes (AKS), Jenkins, CI/CD, Git
- AI & GenAI:** OpenAI APIs, Prompt Engineering, LLM Integration, Retrieval-Augmented Generation (RAG)
- Security:** JWT, Spring Security, OAuth2, Secure Coding Practices
- Practices:** Agile/Scrum, Code reviews, Technical Documentation, SDLC

PROJECTS

On Demand Car Wash Application (Spring Boot, Java, MySQL, MongoDB, React)

- Architected a microservices-based system with asynchronous communication to enable real-time car wash booking updates.
- Implemented secure authentication and authorization using JWT-based security mechanisms.
- Integrated Razorpay test payment gateway and successfully validated 20+ end-to-end transactions during QA testing.

AI Customer Support Chatbot (Spring Boot, REST APIs, OpenAI API)

- Designed end-to-end backend architecture for a RAG-based FAQ chatbot using Spring Boot.
- Built REST APIs for user queries, document ingestion, and response orchestration.
- Integrated OpenAI API to generate contextual responses with prompt tuning for improved accuracy.
- Tested and validated chatbot APIs using Postman and Swagger for response accuracy and proper flow.

CERTIFICATIONS

- Rising Star Award – Capgemini:** Recognized for consistent high performance and impactful contributions.
- Microsoft Certified: Azure Administrator Associate
- AWS Certified Cloud Practitioner

EDUCATION

Lovely Professional University

Bachelor of Technology in Information Technology (CGPA: 7.57)

Jalandhar, Punjab

07/2019 – 08/2023
